The Japan Spring Machine Show is a biennial business trade show dedicated exclusively to the production of springs, exhibiting machines for making springs, machinery and tools related to those machines, materials for springs, and measuring equipment, etc.

The show marks its ninth anniversary this year and has been held in Nagoya since its start in 1995. However, with the recent sign of recovery from economic recession and a hope for further progress of spring related technologies, we decided to hold the show in Tokyo, an information center to the world.

Please stop by. We believe the show will give you an opportunity to see the latest spring manufacturing and related technologies.
